

Priyam Deb

Backend-Focused MERN Developer | Node.js • Express.js • MongoDB

priyamdeb966@gmail.com • 7595947368 • Deganga, North 24 Parganas, 743423 • Kolkata • India

<https://www.linkedin.com/in/priyamdeb/> • <https://github.com/priyamcodes-allday>

Backend-focused MERN Stack Developer and BCA graduate with hands-on experience building full-stack web applications using Node.js, Express.js, MongoDB, React.js, and JavaScript. Strong in REST API development, JWT-based authentication, role-based authorization, MongoDB data modeling, middleware, server-side application logic, and API integration. Experienced in developing secure authentication flows, progress-tracking systems, analytics APIs, and AI-powered application features.

PERSONAL INFORMATION

Location: Deganga, North 24 Parganas, 743423 • Kolkata • West Bengal • India

EDUCATION

10th Standard — The Central Modern School ICSE • Kolkata	Duration: 2018-06-01 - 2019-05-31
--	-----------------------------------

12th Standard — Kalyani Public School Computer Science • CBSE • Kolkata	Duration: 2019-06-01 - 2021-05-31
---	-----------------------------------

Bachelor of Computer Applications (BCA) — Techno Main Salt Lake Computer Science & Information Technology • Kolkata	Duration: 2021-06-01 - 2024-05-31
---	-----------------------------------

SKILLS

Backend

Node.js, Express.js, RESTful APIs, JWT Authentication, Role-Based Access Control, MVC Architecture

Databases

MongoDB, Mongoose

Programming

JavaScript (ES6+)

Frontend

React.js, HTML5, CSS3, Tailwind CSS

PROJECTS

CADENCE — Goal-Based Habit Planner & Tracker Personal Project	Duration: N/A - Present
--	-------------------------

AI-powered MERN application for personalized habit planning, progress tracking, analytics, and goal management.

Role: Backend-Focused MERN Developer

Links: <https://github.com/priyamcodes-allday/CADENCE>

Technologies: Node.js • Express.js • MongoDB • Mongoose • JavaScript • JWT • REST APIs • React.js • Google Gemini API • Tailwind CSS

Built RESTful APIs for authentication, goals, habits, habit tracking, dashboard analytics, and user management.

Implemented JWT access and refresh tokens, OTP email verification, bcrypt password hashing, and role-based authorization.

Enforced backend resource ownership to prevent users from accessing or modifying other users' goals and habits.

Designed habit completion logging to support daily, weekly, and monthly progress tracking and analytics.

Integrated Google Gemini API for personalized habit plans, weekly reports, and daily motivation with response validation and error handling.

Connected the React frontend with backend REST APIs using Axios and protected route handling.
